

B1
D1
cont

a data transfer system for transferring data from said computer base station to said mobile device.

Sub
D1

16. (Twice Amended) A communications and personal organizer method, said method comprising the steps of:

B2

inputting organizer data into a computer base station;

transmitting organizer data including personal scheduling information from said computer base station to a personal organizer unit located in a mobile handset separable from said computer base station; and

using said handset for wireless telephone communication.

B3

19. (Amended) The method of claim 18, wherein said transmitting step occurs while said handset is located in a cradle associated with said base station.
